
Abstract

B2
An apparatus for the cutting-up of fish, fish fillets and the like in slices etc., comprising a feeding unit which comprises means for the feeding of fish/fillets, the feeding unit conveying the fish/fillets to a cutting unit which cuts the fish/fillets in slices, and a unit which comprises means for the collection and processing of data, which means comprise means for the registration of the length of the fish/fillet in the feeding direction and/or the weight of the fish/fillet, and in that the feeding unit comprises a plane on which the fish/fillet is placed and fed forward, the plane forming a settable and adjustable angle to the horizontal plan, means for the automatic adjustment and setting of the angle as a function of the length and/or the weight of the fish/fillet, and also a gripping device which comprises means for the handling of the slices from the area in which the cutting takes place.
